

SCIENCE EXPERIMENT

Cool Science

Red, yellow, and blue are called primary colours. You can make other colours by mixing the primary colours.

Making Colours

Mix colours to make new ones. Ask your mom or dad to help.

YOU WILL NEED:

poster board

black marker

red, yellow, and blue paint

1 Draw a circle using black marker. Divide the circle into six sections like a pie.

2 Spread eight drops of each paint colour onto three sections as shown above.

3 Squeeze four drops of red and four drops of yellow onto a blank section.

4 Mix together to make orange. Make these other colours, too.

red + blue = purple
blue + yellow = green
